

Protection and Maintenance of Marble Surrounds.

Clean with general household cleaning polish i.e. Mr. Sheen, using a soft cloth.

For more stubborn stains caused through the spillage of wine etc. use a cleaning detergent such as Flash, then repeat as above with household polish.

There is no guarantee against staining.

Protection and Maintenance of Limestone Surrounds, Hearths and Slips.

The Chesney's Stone Care Kit has been specifically developed to assist with the protection and maintenance of various types of natural stone. The easy to apply kit provides three key products for sealing, cleaning and maintenance.

Clean with Chesney's **Stonecare**. Apply a small amount of cleaner on to the surface, wipe over surfaces with a clean dry cloth and leave surfaces to dry. It is important that strong household detergents and abrasive cleaners are not used as this will damage the finish on the stone.

For more stubborn stains caused through the spillage of wine etc., use Chesney's **Stonefoam**. Spray an even layer of foam onto the surface of the stone, once the foam has dissolved, agitate with a smooth white emulsifying pad and rinse well with plenty of clean water and leave to dry.

Chesney's **Stonesseal** is a rapid drying spray on sealer for both polished and unpolished stone. Easy to apply this product should ensure that your surfaces will remain well protected. Apply periodically throughout the year and always use to top up protection after intensively cleaning surfaces with Chesney's Stonefoam.

Use a **Smooth White Emulsifying Pad**, available from Chesney's, to work the maintenance products into the stone.

There is no guarantee against staining.

Protection and Maintenance of Slate Hearths and Slips.

Clean with general household cleaning polish i.e. Mr. Sheen, using a soft cloth. Alternatively use spray oil such as WD-40 for minor scratches.

Protection and Maintenance of Steel Baskets, Steel/Cast Iron Register Grates and Steel Slips.

Clean with spray oil such as WD-40, this will help to protect the metal against rust. Moisture is produced by the burning of the gas fire and rust is still likely to form. This is normal and not a problem, the level of moisture is increased when burning solid fuel. Polishing with WD-40 and fine wire wool is highly recommended on a periodic basis. The areas of the basket or register grate near the burning area are subject to 'tempering' which is discolouration of the metal, this is normal and not a problem. The level of discolouration is increased when burning solid fuel. Burn small fires initially to temper the metal slowly.

Gas Fires and Chimney Sweeping

Please refer to the manufacturer's operating instructions.

The gas fire must be serviced on a 12 monthly basis by a Gas Safe Registered approved engineer, this is a legal requirement for the Gas Safety Regs 1994 (Reg.35).

All chimneys must be swept at least once a year preferably by a member of the National Association of Chimney Sweeps (NACS). However, if your appliance is used continuously throughout the year more frequent sweeping is recommended. The best time to have your chimney swept is at the start of the heating season.

Useful Telephone Numbers and Who to Contact

Gas Safe Register - 0800 408 5500

HETAS - 0845 634 5626

The official body recognised by the government to approve solid fuel and domestic heating appliances, fuels and services.

NACS - 01785 811 732

The National Association of Chimney Sweeps.
